Exercise 2 in Canvas: d-separation

- A **path** between **i and j** is **blocked by $A \subseteq V \setminus \{i, j\}$** at least one condition holds, otherwise it is **active**
 - There is a *non-collider* on the path that is in **A** , or
 - There is a *collider* k on the path, but $k \notin A$ and $\text{Desc}(k) \cap A = \emptyset$
- Nodes **i and j** are **d-separated by $A \subseteq V \setminus \{i, j\}$** if **all paths** between i, j are **blocked by A**
 - We denote d-separation as **$i \perp j \mid A$**
- Otherwise we say they are **d-connected, $i \not\perp j \mid A$**
